

Hello and welcome to this MissionCIT course. In this topic, we will be tracing the development of humans right from the time of birth to death. We will be talking about the physiological and psychological changes that happen during the entire lifespan of every individual.

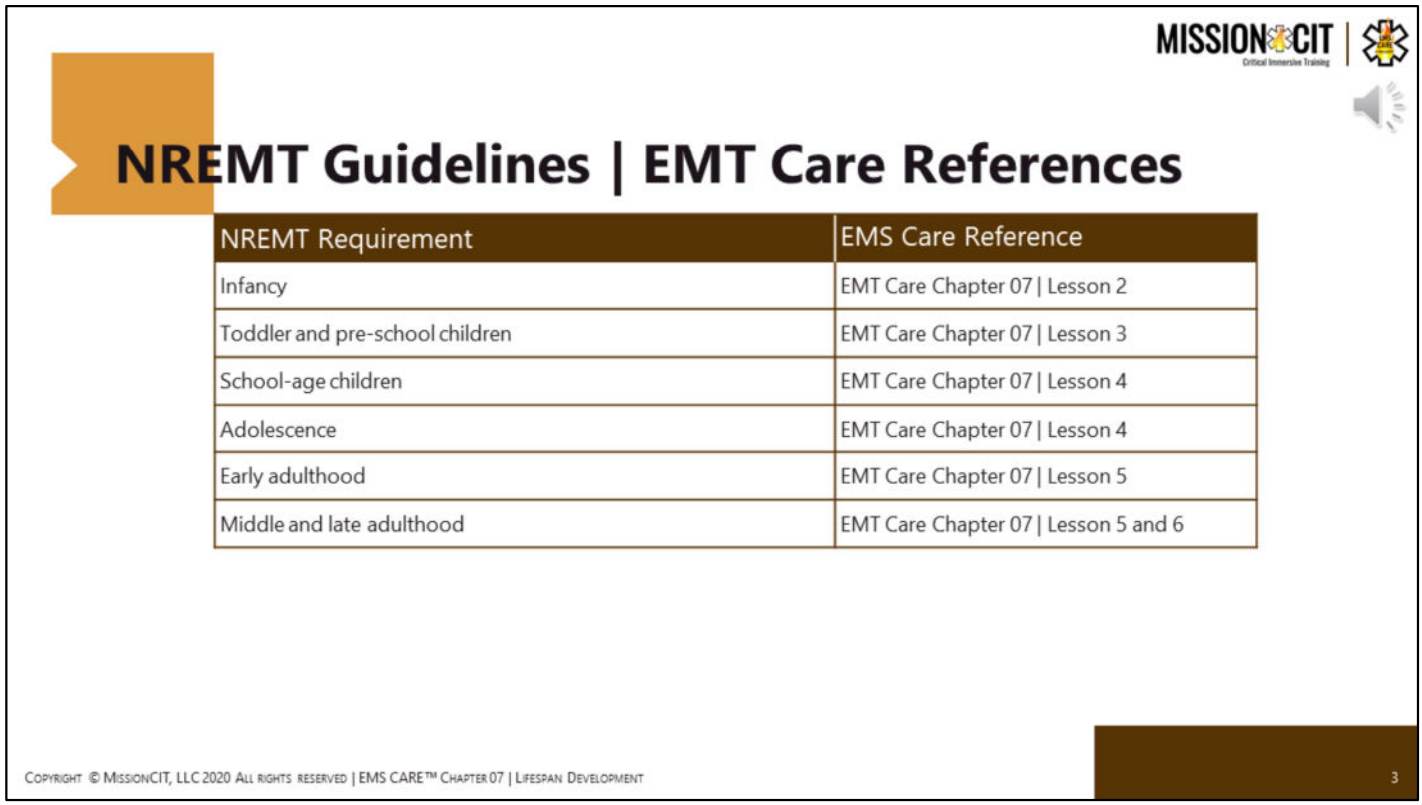

This should be an interesting chapter, so sit back and learn the changes, so you can provide appropriate care.

We will review the following lessons in this chapter:

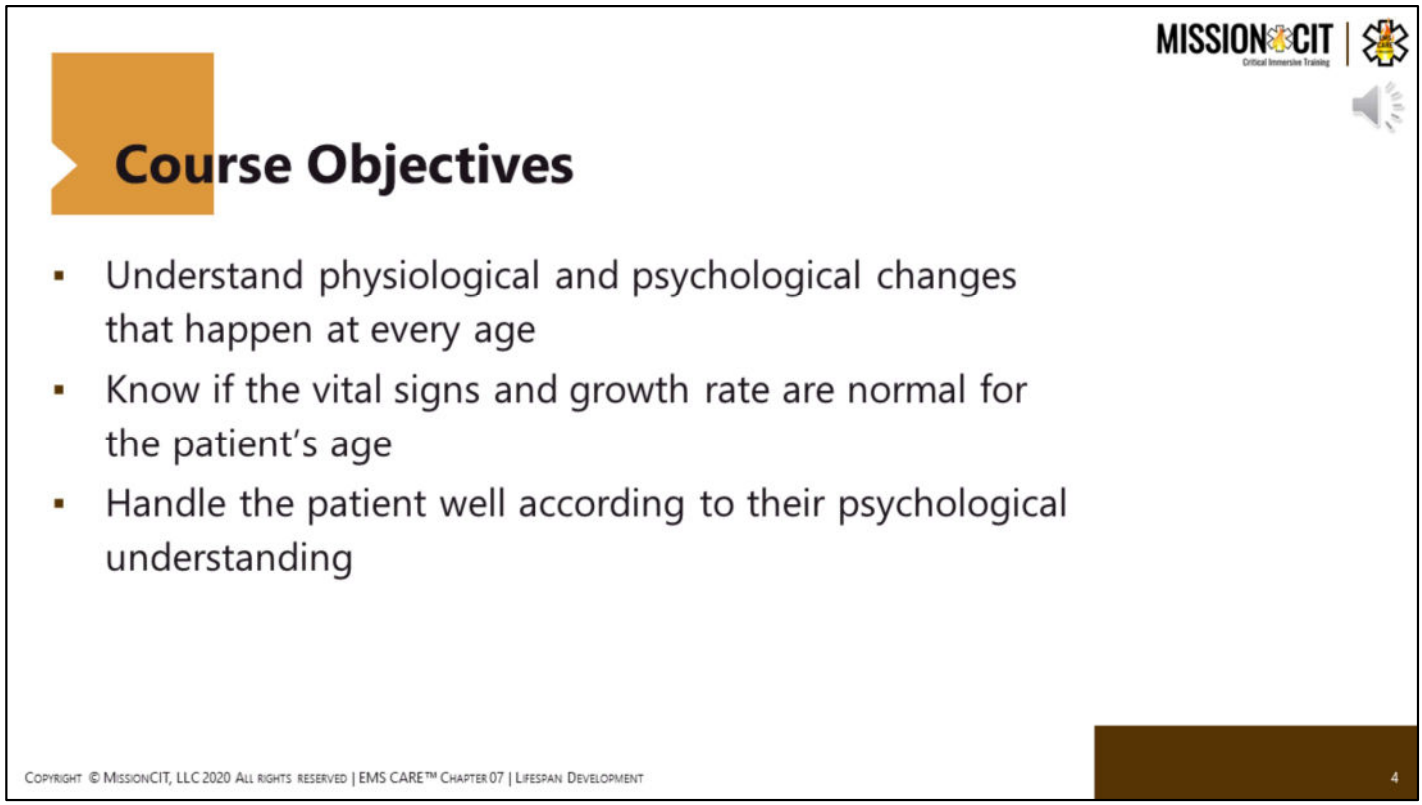

- Lesson 1: Anatomy and Physiology
- Lesson 2: Infancy
- Lesson 3: Toddler and preschool
- Lesson 4: School-age and Adolescence
- Lesson 5: Early and middle adulthood
- Lesson 6: Late adulthood (61 years and older)

We complete our studies with a Chapter Review followed by a quiz. You will need to watch all the lessons, answer the interactive questions; and finally score a 75% grade or higher on the quiz, to get credit for this chapter.

This course fulfills all the NREMT guidelines:

- Infancy
- Toddler
- School-age children
- Adolescence
- Early Adulthood
- Middle Adulthood, and
- Late Adulthood

The objectives of this course are:

- Understand physiological and psychological changes that happen at every age
- Know if the vital signs and growth rate are normal for the patient's age
- Handle the patient well according to their psychological understanding

Now that you have an idea of what to expect from this course, my colleague Missah will guide you through the first lesson.
