

Missa:

Hello and Welcome; and thank you for selecting MissionCIT's EMS Care courseware. I am Missah, your host for the first part of this Chapter About Care for Patients with Special Challenges.

My colleague Justin and I, will take turns presenting the material.

As a reminder, or in case you are starting in this chapter; most of the course materials are available via audio. So you can listen while on the move. The audio is intended

to complement the written materials and may vary from the words in the slide deck. More importantly, we will include some essential additional information. So be sure to listen carefully.

Justin, do you have anything to add.

Justin:

Thank you Missah. First, I want to thank the course Instructor Aimee Lynn Roberts for providing the guidance and material to share with you.

If you should have questions, please notice the left hand column on this page; and use the tab named: ‘browse Q and A: Here you are able to view other student’s questions and responses; or ask your own.

Answers will be made available within 1 business day or sooner. Questions will be covered during the chat and video sessions as well.

And if you would like to follow the words, please click the link below to see the speech text. Note that the elevator slide bar for this text is on the far right of your screen. There is also a closed captioning for this chapter. If it is not turned on, if accessible, turn it on from the YouTube control bar at the bottom of the video. If not available, you would have to go to any YouTube video in

another tab, and then turn the C C on there.

Missah, please continue.

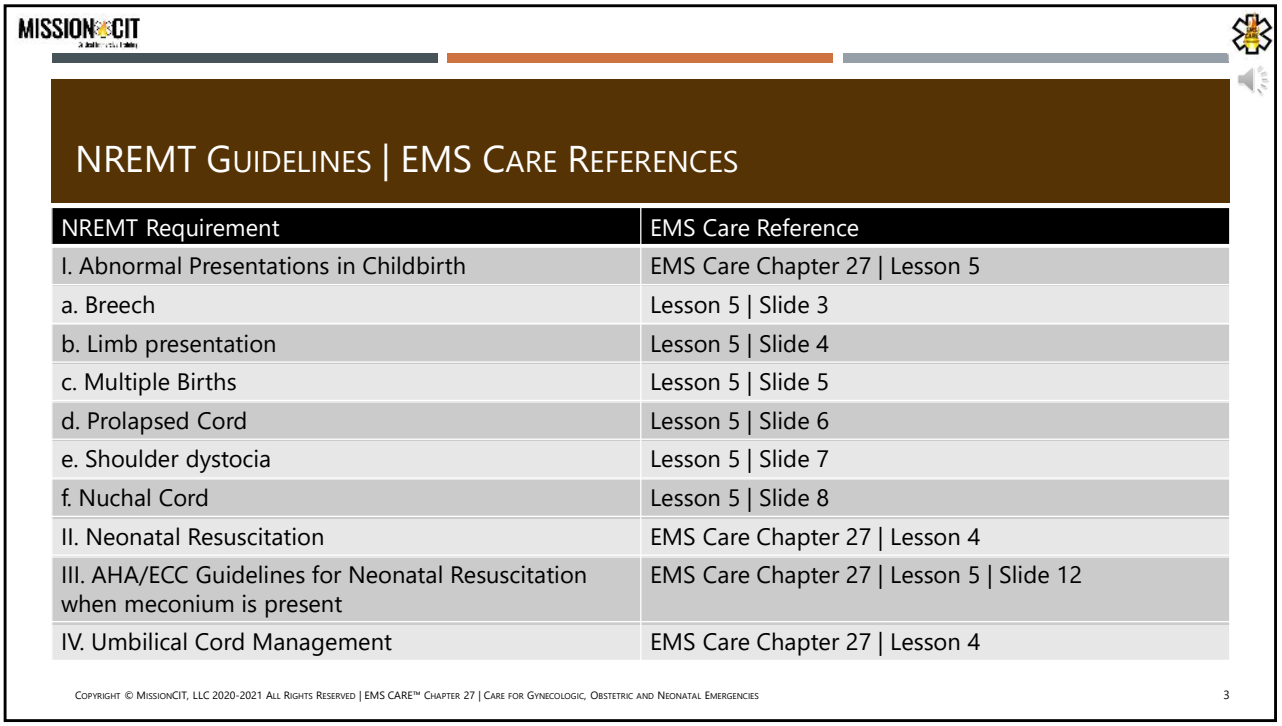

We begin this chapter on Care for Gynecologic, Obstetric and Neonatal Emergencies with a review of the NREMT national competency requirements for recertification. We subsequently explore in-depth:

- Lesson 1: Anatomy and Physiology of the female reproductive system
- Lesson 2: Physiology of Labor and Pre-Delivery Assessment
- Lesson 3: Normal Childbirth
- Lesson 4: Post Delivery: Neonate & Mother
- Lesson 5: Childbirth Complications

- Lesson 6 discusses Pregnancy Emergencies, and
- Lesson 7 covers Gynecological Emergencies

We complete our studies with a Chapter Review followed by a quiz. You will need to watch all the lessons, answer the interactive questions; and finally score a 75% grade or higher on the quiz, to get credit for this chapter.

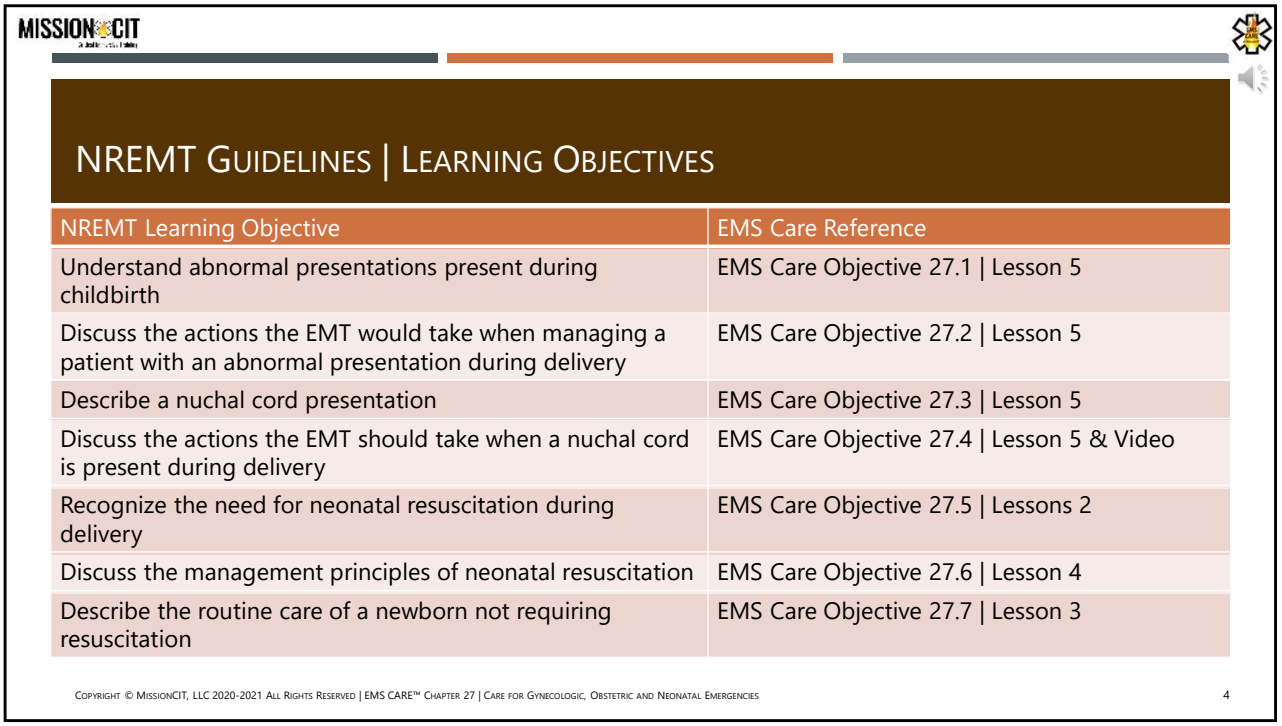

The NREMT educational guidelines are listed in the table on this slide. You can reference the associated EMS Care lesson where the material is found. The content in this chapter fully covers the defined NCCP educational guidelines along with supplemental knowledge relevant to the subject matter.

The four main National Registry Requirements are to understand and know how to manage

1. Abnormal presentations in Childbirth.

2. The various aspects of neonatal resuscitation.
3. American Heart Association guidelines for neonatal resuscitation when meconium is present. and
4. Umbilical cord management during childbirth.

The NREMT learning objectives are listed in the table on this slide. You can reference the associated EMS Care lesson where the material is found

In addition to the NREMT objectives, the Core Concepts and takeaways from this chapter include:

- Understand the anatomy and physiology of the female productive system.
- Know how pregnancy affects female physiology and anatomy
- Recognize a pregnancy emergency and be able to

manage the evolving conditions

- Caring for a neonate including resuscitation
- Managing the mother post-delivery
- Pre-labor pregnancy emergencies, and finally
- Having a basic overview of non-pregnancy related gynecological emergencies.

Good Studying.
