

Missa:

Hello and Welcome, and thank you for selecting MissionCIT's EMS Care courseware. I am Missah, your host for the first part of this Chapter About Pediatric Emergencies and Pediatric Transport.

My colleague Justin and I will take turns presenting the material.

As a reminder, or if you are starting in this chapter, most of the course materials are available via audio. So you can listen while on the move. The audio is intended to

complement the written materials and may vary from the slide deck's words. More importantly, we will include some essential additional information. So be sure to listen carefully.

Justin, do you have anything to add?

Justin:

Thank you Missah. First, I want to thank the course Instructor Aimee Lynn Roberts for providing the guidance and material to share with you. Aimee is a certified EMS-I, has trained untold thousands of EMS students, and was awarded the Connecticut EMS Instructor of the Year award.

If you should have questions, please notice the left-hand column on this page; and use the tab named: 'browse Q and A: Here, you can view other students' questions and responses or ask your own.

And if you would like to follow the words, please click the link below to see the speech text. Note that the elevator slide bar for this text is on the far right of your screen. Finally, please look for embedded 3d models and animations in the pop-up text. We hope you find them helpful. You can rotate the model using the left-click of your mouse or one-finger on a touch screen device. Also, you can slide the model using the right-

click or two-fingers on a touch screen. We have included a 3d model on this page so you can try it out.

Missah, please continue.

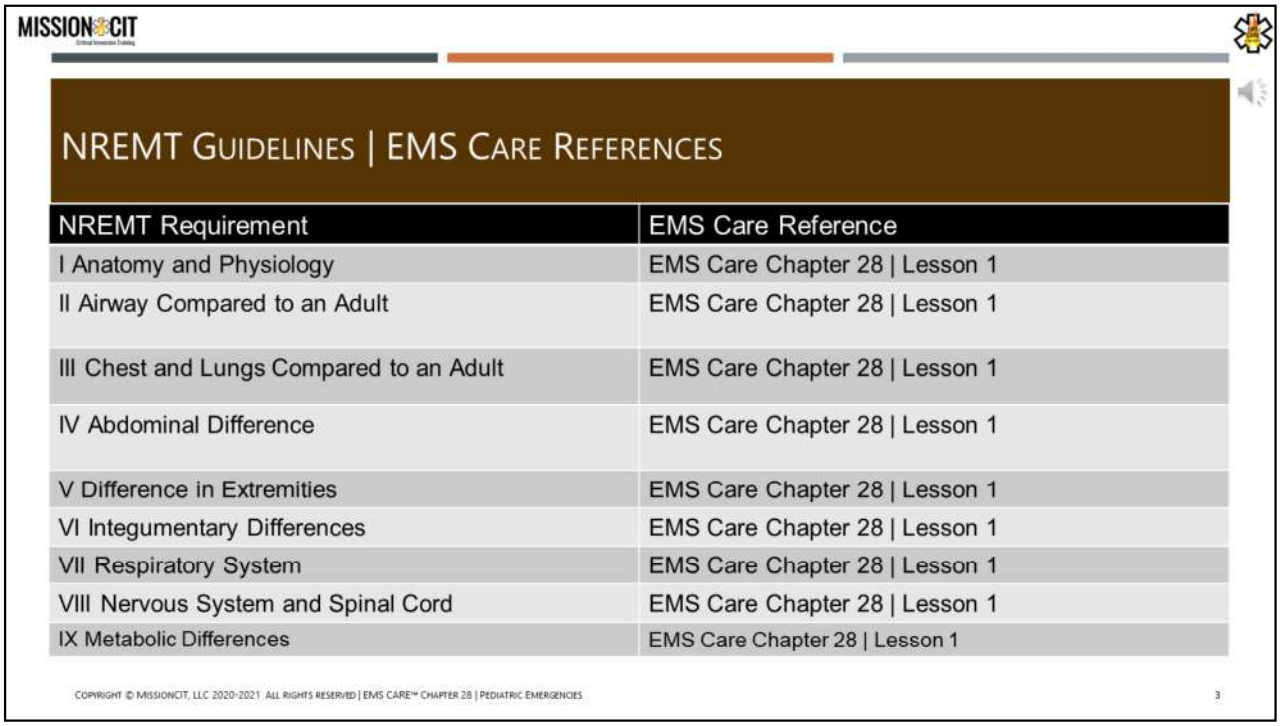

We will be having the following lessons in this chapter

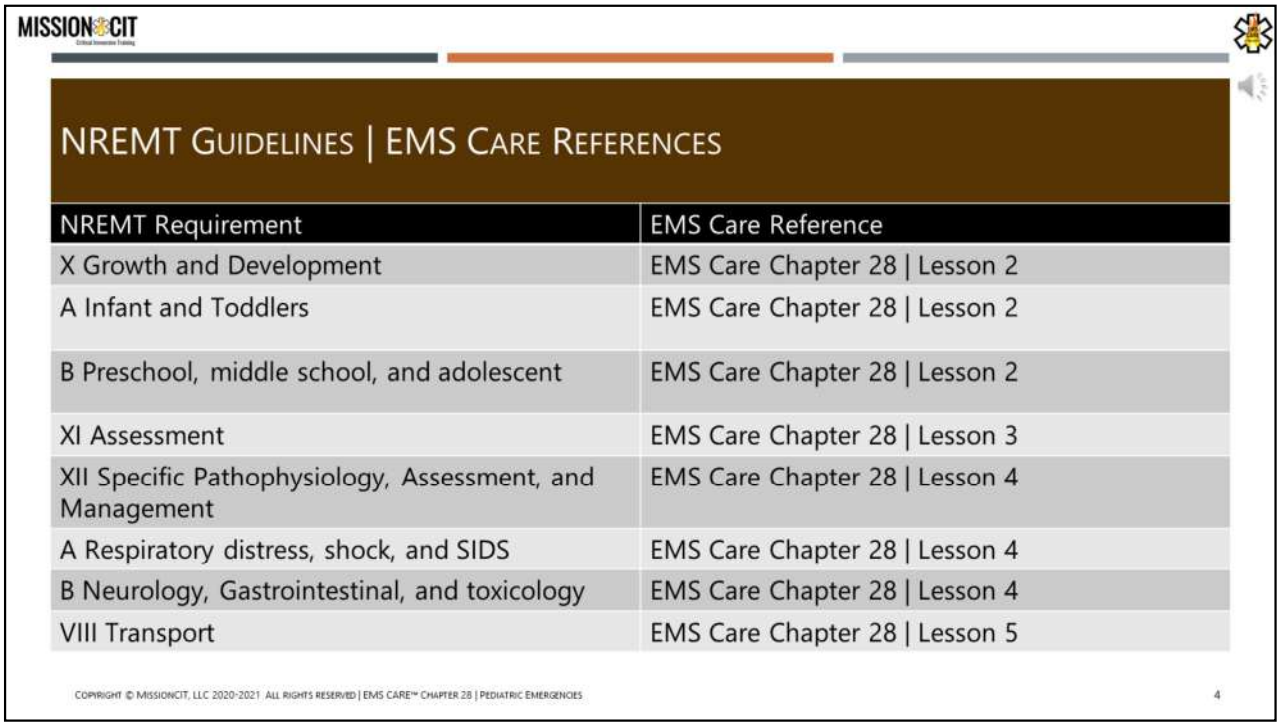

- Lesson 1: Anatomy and Physiology
- Lesson 2: Growth and Development
- Lesson 3: Assessment
- Lesson 4: Specific Pathophysiology, assessment, and management
- Lesson 5: Transportation

We complete our studies with a Chapter Review followed by a quiz. You will need to watch all the

lessons, answer the interactive questions; and finally score a 75% grade or higher on the quiz, to get credit for this chapter.

The NR EMT educational guidelines are listed in the table on this slide and the next. You can reference the associated EMS Care lesson where the material is found. The content in this chapter fully covers the defined NCCP educational guidelines, along with supplemental knowledge relevant to the subject matter.

Again, please look for embedded 3d models and animations in the pop-up text. The model on this page is an animation of children we thought would be a good way to learn how to use the models. Please go now and rotate the model using the left-click of your mouse or one-finger on a touch screen device. Also, you can slide the model using the right-click or two-fingers on a touch screen.

Good Studying.
